

In Vitro Wall Dimmable 1-10V

New

■ F018B22B030 - Black

Lighting unit with diffuse light for exterior wall installation. Integrated opalescent diffuser and external protection in transparent borosilicate glass.

The structure is made of die-cast and extruded aluminium treated with a chemical conversion process for effective resistance to atmospheric agents. The body is powder coated and comes in various finishes.

Integrated LED light source with Edge Lighting optical technology to guarantee perfect uniform lighting.

Light source included. Integrated 220–240 V ON/OFF or dimmable electrical power.

110-V version upon request.

Main specifications

Lamp category	LED	Mountings	Wall
Power (W)	11	Environment	Outdoor wet location
CCT (K)	2700K		
CRI	80		
Net lumen (lm)	667		

Optical

Lighting type	Direct
LED type	Edge Lighting
Light distribution	Symmetric
Optical type	Diffused light
Beam angle (°)	111
Beam angle C90-270 (°)	111

Beam Angle: 111°

h(m)	E(lx)	D(m)
1	248	2.89
2	62	5.79
3	28	8.68
4	15	11.57
5	10	14.46

Luminous flux luminaire
667 lm

Electrical

Frequency (Hz)	50-60	Emergency	Without
Voltage (V)	220-240	Insulation class	I
Dimmable	Yes		
Driver	Integrated		
Driver type	Dimmable 1-10V		

Physical

Color	Black
Orientation	Fixed
Weight (kg)	2.2

Note

We recommend using a connection system with a degree of protection greater than or equal to the degree of protection of the luminaire.

During the installation and the maintenance of the fixtures it is important to be careful and avoid damages on the paint coating.

Damages on the coating exposed to outdoor conditions or water, could cause corrosion.

Chemical substances affect the anticorrosion covering protection.

For LED fixtures, there is evidence that most of the damages are connected to electrical effects related to the insulations, which cause destructive electrical discharges

These effects are frequently caused by:

- over voltage coming from the mains' network where fixture is connected.
- electrostatic discharge (ESD) coming from the environment.

The use of a protective device against the overvoltage on the electrical installation is warmly suggest this helps to reduce the intensity of some of these phenomenon and prevent irreversible damages. The selection of the type of device to be used must be adjust on the electrical plant.
