by Nendo , 2018

A light consisting of two independent cylinders touching each other in a perpendicular direction. One plays the role of a light source, while the other acts as a base. Its projection angle can be adjusted in three stages of 25, 40 or 60 degrees, by inserting the pin attached to the base. Various functions are made possible by doing away with excess elements and creating a simple form.

Base and body in extruded aluminium with painted or galvanized finish. Diffuser in photo-etched injection-moulded polycarbonate. Reflector in painted die-cast aluminium. Dimmer function and channel mixing via a pedal switch on the cord. Corded power supply with interchangeable plugs.
